Final results of the weathering fastness test

Test order no. 126569/17

Dear Mr. Döngel,

Please find below the following results of the final assessment of weathering fastness after artificial weathering of approx. **10,185 hours** (sample 1) and **10,195 hours** (sample 2, 3, 4):

Irradiation energy: **20 GJ/m²**

Artificial weathering according to EN 513, procedure 1 (simulation of a **moderate** climate zone **M**) up to an irradiation dose of each **20 GJ/m²** in the wave length range between 300 nm and 800 nm.

1. Colourimetric assessment:

The sample colour was measured by means of a spectrophotometer of a wave length area of 360 - 750 nm, standard light type D65, gloss inclusion, 10° normal inspection. The colour distance ΔE^*_{ab} was determined according to DIN EN ISO 11664-4. Prior to and after artificial weathering, colour was measured at the same position on the sample to obtain reproducible results despite the structured surface.

Please note that the colourimetric assessment of the structured foils can only be taken as a guide value.

2. Visual assessment

Visual assessment was performed according to DIN EN 20105-A02 and DIN EN 20105-A03 with the grey scale.

Sample 1: Anthracite Gray P-ST508-20-066-2
